What Is UTWind

Founded in 2020, UTWind is a student-led engineering design team at the University of Toronto driving innovation in renewable energy through hands-on wind turbine design and sustainable prototyping.

With 200+ active undergraduate and graduate members from across engineering and business disciplines, we work in five interdisciplinary sub-teams – Aerodynamics, Controls, Mechanical & Manufacturing, Power, and Sustainability – to design and build a small-scale wind turbine each year.

Team Affiliation

University of Toronto's Wind Turbine Student Design Team (UTWind) is an officially recognized student design team under the Faculty of Applied Science and Engineering. UTWind is affiliated with the Engineering Society and the University's Recognized Student Groups program.

Competition & Achievements

1ST PLACE 2022

Teams from around the world design, build, and test small-scale wind turbines in real-world conditions—making it one of the most hands-on and competitive renewable energy competitions for students.

MOST SUSTAINABLE 2023

The International Small Wind Turbine Contest (ISWTC) is a multidisciplinary engineering challenge held each summer in Europe.

1ST PLACE 2024

MOST SUSTAINABLE RUNNER-UP 2025

Our Results

What do we Do?

OUR PROJECTS

Vertical Axis Wind Turbine

UTWind is developing a Vertical-Axis Wind Turbine (VAWT) optimized for reliable, small-scale energy generation in diverse wind conditions. The project allows students to apply their engineering knowledge through hands-on design, manufacturing, and testing, while contributing to accessible and sustainable wind energy solutions.

Campus Turbine

UTWind, in partnership with the U of T Sustainability Office, is installing a small-scale wind turbine on campus. The turbine provides clean energy for device charging, raises awareness of renewable technologies, and offers your organization a visible role in advancing campus sustainability.

INNOVATE
SUSTAINABLY

INTERNATIONAL
REPRESENTATION

PROMOTE CLEAN
ENERGY

PET Bottle Recycling

UTWind recycles discarded PET bottles into 3D printing filament for turbine prototyping. This project reduces plastic waste, promotes circular manufacturing, and gives students hands-on sustainable engineering experience. Your support will help expand the initiative and fund the equipment needed to transform campus waste into materials for renewable energy design.

Why Sponsor Us?

By supporting UTWind, you are not only helping us build a wind turbine, you are allowing students to grow their skills and develop their creative potential. Help us keep going!

INVEST IN FUTURE INNOVATORS

Your support directly empowers students to turn classroom theory into real-world solutions. By sponsoring UTWind, you help students gain industry-relevant experience in renewable energy systems, sustainable manufacturing, and interdisciplinary teamwork—skills that prepare them to drive innovation in Canada's clean energy future.

SHOW COMMITMENT TO SUSTAINABILITY

Partnering with UTWind highlights your organization's commitment to clean energy innovation and STEM education. Your support demonstrates corporate leadership in sustainability, empowering students to design practical solutions for a greener future.

EXPAND YOUR REACH

With a workspace at the University of Toronto's Myhal Centre for Engineering Innovation & Entrepreneurship, UTWind connects sponsors with one of North America's top engineering communities.

Gain visibility through:

- 200+ annual competition attendees
- 600+ social media followers
- 60,000+ students at U of T's St. George campus

Sponsor Benefits

Your brand will be featured across digital platforms, team apparel, events, and competition showcases—enhancing your presence in the sustainability and technology sectors. Your sponsorship directly empowers students while giving your organization meaningful visibility and engagement opportunities:

LOGO PLACEMENT

Featured on UTWind's website, reports, posters, presentations, team apparel, and even the turbine nacelle displayed at international competitions.

1

2

BRAND ALIGNMENT

Associate your company with renewable energy, sustainability, and innovation through partnership with one of U of T's leading design teams.

ENGAGEMENT OPPORTUNITIES

Participate in presentations, workshops, and tech talks – directly connecting with passionate, skilled engineering students.

3

4

POTENTIAL TAX BENEFITS

For sponsors seeking tax-related documentation, contributions can be processed through the University of Toronto Engineering Society (EngSoc) and designated to support UTWind. Please contact us for more information.

ADDITIONAL SPECIAL REQUEST YOU MAY HAVE

We would be happy to talk about any additional requests you have in mind, such as a specific recruitment events, marketing campaigns, and more! Don't hesitate to get in touch with us for more details.

Our Mission & Community

EDUCATION

UTWind develops future engineers and leaders through practical, project-based learning, giving members hands-on experience in CAD, PCB design, 3D printing, and aerodynamics tools like QBlade and ANSYS.

INDUSTRY ENGAGEMENT

UTWind engages with industry leaders and alumni through events like the U of T Dean's Dinner and Engineering Alumni Reunion, offering partner visibility and fostering collaboration in clean energy.

DIVERSITY & INCLUSION

We take pride in our diverse, inclusive community with strong representation from underrepresented and LGBTQ+ groups. Through hybrid participation, safety training, and open recruitment, every student can contribute and grow.
